

Senior Paid Media Buyer

Variable Compensation Structure

1. Role intent

Primary mandate: Deliver predictable, scalable, and budget-disciplined demand that feeds Sales without breaking CAC, GM, or EBITDA.

This role is a capital allocation + throughput role. The compensation plan rewards:

- Budget discipline first
- Consistent volume second
- Exceptional scale last (uncapped, but gated)

2. Compensation summary

Monthly base	Target variable	Target OTE
\$2,200 / month	\$2,000 / month	\$4,200 / month
Fixed	At-plan payout	Base + full variable

Guarantee period (months 1–3)	\$3,400 / month guaranteed
Coverage	Paid regardless of performance while the hire ramps up. If earned variable in any month exceeds \$3,400, the higher amount is paid.
Duration	Months 1, 2, and 3 only. Full variable plan applies from month 4 onwards.

3. Variable structure

The \$2,000 target variable is divided into two components:

Component	Weight	Description
Performance	60% · \$1,200 at plan	CPMQMH efficiency + MQMH volume delivery
OKRs	40% · \$800 at plan	R&D, Diversification, Tracking & Analytics (quarterly)

4. Monthly performance variable (60% · \$1,200 at plan)

Calculated and paid monthly. Three independent sub-components: A (foundation), B (core driver), C (uncapped kicker).

Component A — Budget discipline & efficiency

Target payout: \$600 · Gates: marketing spend ≤ approved monthly budget

CPMQMH vs plan	Payout	% of target
CPMQMH ≤ plan (on target)	\$600	100%
CPMQMH up to +5% above plan	\$450	75%
CPMQMH up to +10% above plan	\$300	50%
CPMQMH >10% above plan	\$0	0%

Component B — Volume delivery

Target payout: \$600 · Metric: marketing-generated MQMH booked meetings (monthly)

Volume attainment	Payout	Notes
<80% of volume target	\$0 – \$300	0–50% · linear
80% – 100% of volume target	\$300 – \$600	50–100% · linear
100% of volume target	\$600	100%

Component C — Scale & impact kicker (uncapped)

Activates only above 100% of volume target. Gate: CPMQMH must remain ≤ goal \$.

Rate	\$10 per incremental booked meeting above plan
Cap	None — unlimited upside
Gate	CPMQMH ≤ goal \$ in the same month

Payout formula

Total variable = A + B (+C if volume > 100% AND CPMQMH ≤ goal)

Payout logic & thresholds

Scenario	Outcome
Volume < 100%	A + B paid per tiers · total comp capped ~\$2,600
Volume = 100% AND CPMQMH ≤ plan	Full OTE unlocked · \$4,200 total

Volume = 100% but CPMQMH > plan	A paid at tier · OTE not unlocked
Volume > 100% AND CPMQMH ≤ plan	Component C activates · uncapped above \$4,200

5. Quarterly OKR variable (40% · \$800 at plan)

Targets are defined at the start of each quarter. Weightings within this 40% bucket are set quarterly. No uncapped upside on this component.

OKR Component	Description
R&D	Testing new channels, creatives, audiences, or bidding strategies to expand the paid media playbook.
Diversification	Reducing concentration risk across ad platforms, audience segments, and campaign types.
Tracking & Analytics	Improving attribution coverage, reporting accuracy, and marketing data infrastructure.

OKR targets, individual weights within the 40% bucket, and measurement criteria are defined collaboratively at the start of Q1 and reset each subsequent quarter.

6. Cadence & governance

Payment cycle	Monthly, paid with standard variable cycle
Target resets	Quarterly (governance only — not pay events)
Components calculated	Independently (A, B, C are separate calculations)
Quarterly cash bonuses	None — quarterly cadence is used only for OKR resets
